
Val bits on 33,344 held-out 1000-1199 positions and 42,433 held-out 2000-2199 positions (shard 000) while training once over 6.87M positions of 1000-1199 games (the best checkpoint is the last evaluation, so it was still improving). The 2000-2199 line is noisy because those ratings were never in training. Base model test (all test positions): 2.830 bits on 1000-1199 (849,649 positions), 3.263 on 2000-2199 (371,077).
