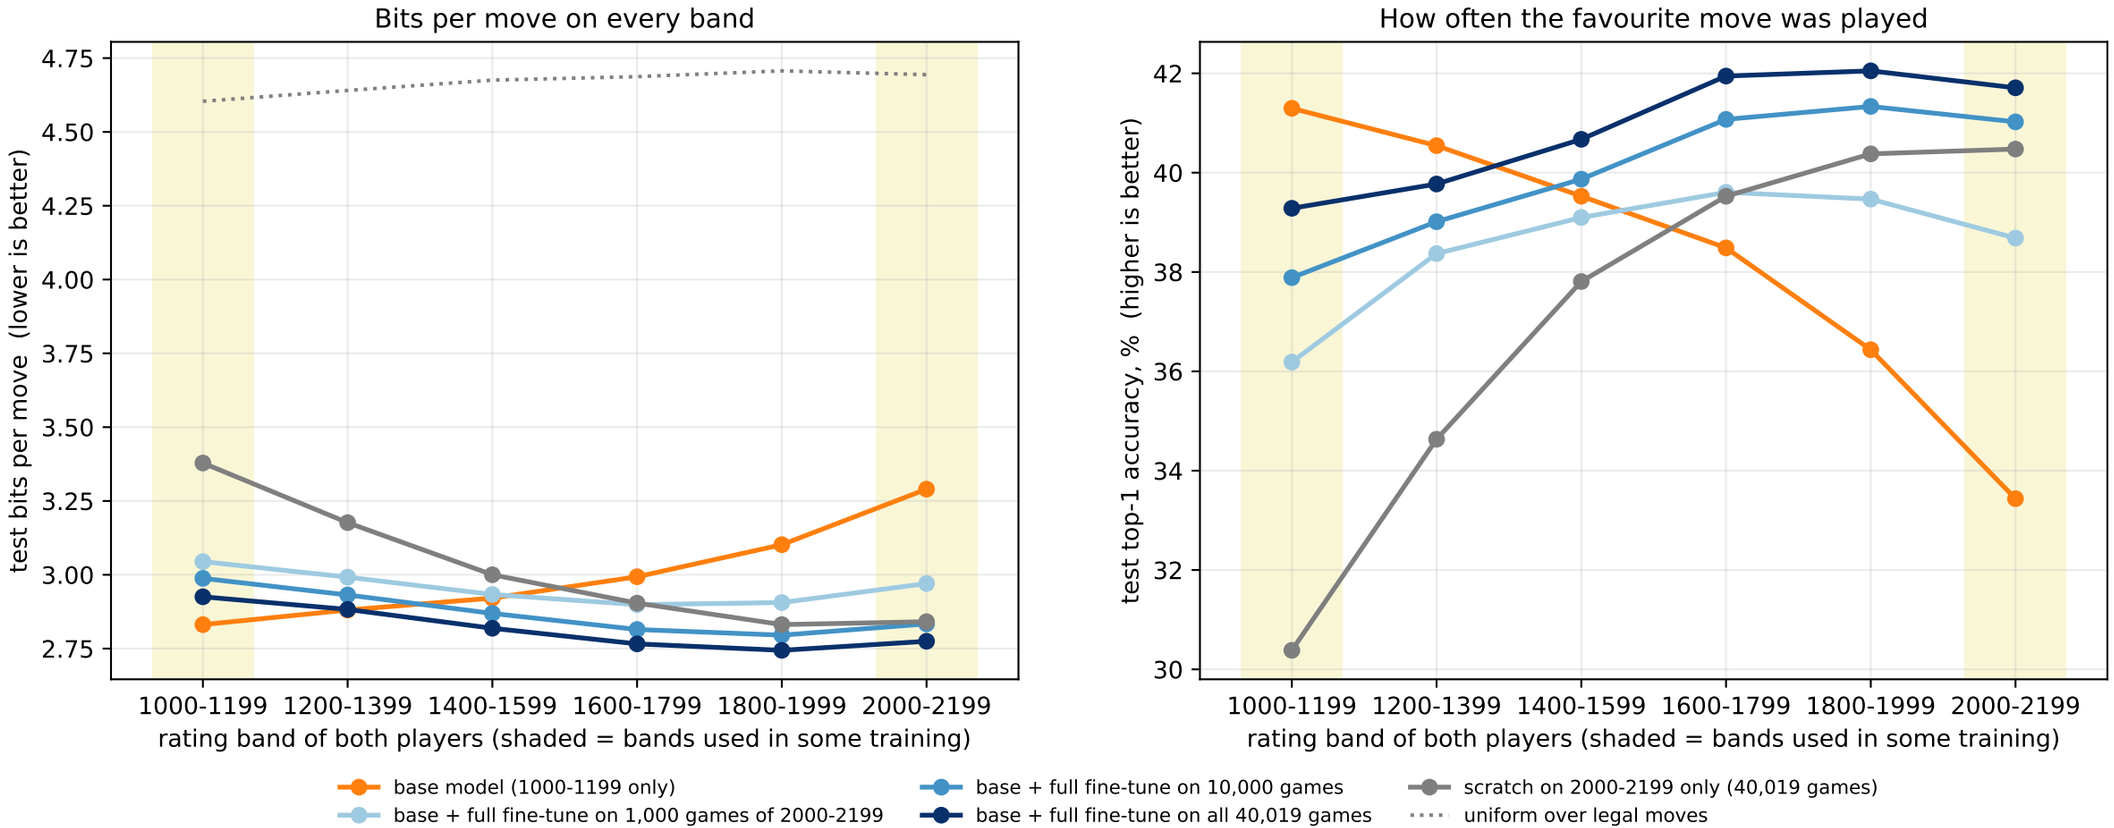
After full fine-tuning on all strong games, the model is the best of these models on 1400-1999, where it never trained



Test positions per band (shard 000 test rows): 1000-1199 28,654, 1200-1399 30,823, 1400-1599 32,411, 1600-1799 34,054, 1800-1999 34,887, 2000-2199 37,050. Each model uses the real rating of the player to move. The middle bands (1200-1999) were never used for training by any model. The base model goes from 2.831 bits on 1000-1199 to 3.290 on 2000-2199. Full fine-tuning on all strong games costs +0.094 bits on 1000-1199 (forgetting). The scratch model never saw weak players and is the worst model on 1000-1599.
